

# LAB REPORT

FROM THE DE LORENZO LABORATORY & EVALUATION

## nova color protect

De Lorenzo Novacolor Protect aids in the prevention of scalp irritation and staining when colouring, powder lightening, permanent waving and permanent straightening. Protect [Polysorbate-80] is derived from Sorbitan, a water soluble yellow liquid, which comes from fruit and berries.

Polysorbate-80 is often used in ice-cream to prevent milk proteins from completely coating the fat droplets. This allows them to join together, to hold air in the mixture, and provide a firmer texture, holding its shape as the ice-cream melts.

Also found in baby products to reduce irritancy of other ingredients including cleansing agents.

Protect mixed in with Novacolor forms a protective barrier between the scalp and colour mix reducing sensitivity and staining. Protect is also useful in the removal of product build up on the hair.

### DIRECTIONS

#### To reduce skin sensitivity and staining:

Add 1g of Protect to each 20g of Novacolor, Powder Lighteners or Perms.

#### To reduce skin staining:

Apply and distribute directly to hair line and nape area.

#### To help protect operators hands:

Distribute lightly between palms before conducting chemical services.

#### To remove a product build-up:

Distribute Protect through wet hair. Cover with cap and place under steamer for 10 -15 mins.

Rinse and shampoo with Essential Treatments Absolute Deep Cleanser.

Continue with required service.

### INGREDIENTS

Polysorbate-80.
